

Hello future 7th graders and parents,

Here are some summer learning opportunities for you to be working on before you start 7th grade in August:

- iReady - complete about 20 minutes a day, 3 days a week
- [Khanacademy.org](https://www.khanacademy.org) - videos, tutorials, lessons, and practice problems are available here.
Some topics to focus on include:
 - Proportions and proportional relationships
 - One-variable algebraic equations and expressions and inequalities
 - Perimeter and area
 - Representations of a portion - fractions, decimals, and percents - know how to convert the different representations to others
 - Integers - adding, subtracting, multiplying, and dividing
- Math facts! Use flashcards to practice multiplication/division facts. Approximately 10 minutes per day is a good goal.
